

# Initial Render Benchmark

# Phase Durations

# Test pr-306-0fa00ae JS Samples Against master-e65437d JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %0.00 chance of observing these samples:  
the result is statistically significant (less than %5 chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is -153.95ms, with a %95 confidence it is between -195.11ms and -119.06ms.

# Test pr-306-0fa00ae JS Samples Against v2.1.0 JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %0.00 chance of observing these samples:  
the result is statistically significant (less than %5 chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is -151.67ms, with a %95 confidence it is between -193.88ms and -106.02ms.

# Test pr-306-0fa00ae JS Samples Against v1.3.4 JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %0.00 chance of observing these samples:  
the result is statistically significant (less than %5 chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is -161.45ms, with a %95 confidence it is between -200.52ms and -121.30ms.

# Test pr-306-0fa00ae JS Samples Against control JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %6.32 chance of observing these samples:  
the result is statistically insignificant (%5 or greater chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is  $-35.89\text{ms}$ , with a %95 confidence it is between  $-75.82\text{ms}$  and  $+2.22\text{ms}$ .

# Test master-e65437d JS Samples Against v2.1.0 JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %71.74 chance of observing these samples: the result is statistically insignificant (%5 or greater chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is +8.17ms, with a %95 confidence it is between -33.20ms and +50.20ms.

# Test master-e65437d JS Samples Against v1.3.4 JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %71.23 chance of observing these samples:  
the result is statistically insignificant (%5 or greater chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is -6.36ms, with a %95 confidence it is between -43.91ms and +35.65ms.

# Test master-e65437d JS Samples Against control JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %0.00 chance of observing these samples:  
the result is statistically significant (less than %5 chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is +118.04ms, with a %95 confidence it is between +82.92ms and +158.86ms.

# Test v2.1.0 JS Samples Against v1.3.4 JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %59.32 chance of observing these samples: the result is statistically insignificant (%5 or greater chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is  $-10.72\text{ms}$ , with a %95 confidence it is between  $-55.05\text{ms}$  and  $+33.23\text{ms}$ .

# Test v2.1.0 JS Samples Against control JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %0.00 chance of observing these samples:  
the result is statistically significant (less than %5 chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is +113.05ms, with a %95 confidence it is between +69.36ms and +155.08ms.

# Test v1.3.4 JS Samples Against control JS Samples

Wilcoxon rank sum test with continuity correction

If the true location shift were equal to 0, there is a %0.00 chance of observing these samples:  
the result is statistically significant (less than %5 chance of incorrectly rejecting the null hypothesis).

Estimated difference in location is +125.95ms, with a %95 confidence it is between +83.99ms and +163.89ms.
